

Assignment 1

1. Define Machine Learning and explain its significance in modern technology.
2. Describe the features of Machine Learning. How does it differ from traditional programming?
3. Explain the Machine Learning life cycle. What are the seven major steps involved?
4. Differentiate between Supervised, Unsupervised, Semi-Supervised, and Reinforcement Learning with examples.
5. Discuss the various applications of Machine Learning in real-world scenarios. Provide at least three examples.
6. What is Data Preprocessing? Why is it important in Machine Learning? Explain different preprocessing steps.
7. Explain the concept of Data Cleaning. How can missing values and noisy data be handled?
8. What is Data Visualization? Explain its types?
